TECHNICAL SKILLS

Languages: Python, C++, C, Java, JavaScript/TypeScript, HTML/CSS, SQL, Bash

Technologies: React, Next.js, Node.js, Tailwind, Pandas, NumPy, Matplotlib, Scikit-learn, FastAPI, Spring Boot

Developer Tools: VS Code, PyCharm, Docker, Git, AWS, MySQL, MongoDB, Snowflake, Linux CLI, Claude Code

EXPERIENCE

Full-Stack Software Developer

September 2024 - June 2025

FMSS Engineering Club

Brampton, ON

- Engineered a full-stack club event management platform using React, Node.js, Express, and MongoDB, enabling **50+ members** to browse events, register, and track participation in real time.
- Optimized RESTful APIs with Express and Node.js to handle event creation, member sign ups, and activity tracking, **reducing manual coordination by 50%** and improving data consistency across the platform.
- Scaled MongoDB data models and dynamic React components to support concurrent registrations and improve system responsiveness, leading to a **30% increase** in member event participation.

Computer Science & Mathematics Tutor

September 2023 - June 2025

Fletcher's Meadow Secondary School

Brampton, ON

- Delivered **150+ hours** teaching object oriented programming, data structures/algorithms in Python/Java.
- Tutored **15+ peers** in calculus, simplifying limits, derivatives, and integrals while raising scores by **20-30%**.

PROJECTS

Rentscope | *Python, Next.js, Tailwind, Node.js, FastAPI, MongoDB, Snowflake*

[GitHub](#)

- Developed an end-to-end, map-first housing intelligence system ranking Toronto neighborhoods by rent, commute, safety signals, and amenities using a multi-agent AI pipeline, designed to scale to **10,000+ records**.
- Designed a production-style architecture with MCP-grounded tools, ensuring AI agents reason only over validated public datasets, **reducing hallucinated outputs by 40%** during evaluation testing.
- Engineered scalable data pipelines with MongoDB caching and Snowflake warehousing to support fast neighborhood analysis and seamless future integration of live rental listings.

E-commerce Store/Dashboard | *TypeScript, React, Next.js, REST API, Prisma, Stripe*

[GitHub](#)

- Developed an e-commerce dashboard allowing users to create and manage multiple stores, with custom REST APIs for store management, supporting **100+ users** and reducing setup time by **45%**.
- Engineered a dynamic storefront with real-time product data integration from the dashboard, implementing advanced filtering (size, category, price), improving product query performance and optimizing product discovery.
- Integrated live data synchronization between admin and storefront views using Next.js and Prisma, **reducing manual updates by 60%** and ensuring data consistency across stores.

Heart Disease Prediction | *Python, Scikit-learn, NumPy, Pandas*

[GitHub](#)

- Developed an end-to-end machine learning pipeline to predict heart disease risk, achieving **85% classification accuracy**, using logistic regression on **300+ patient records**.
- Improved model reliability through data cleaning and feature engineering, validated via an **80/20 train-test split**, using Python, Pandas, NumPy, and scikit-learn.
- Evaluated model performance on a held-out test using accuracy and classification metrics, ensuring robust generalization, with scikit-learn's evaluation framework.

Car Marketplace | *Java, Git*

[GitHub](#)

- Built a Java marketplace using object-oriented design for **50+** vehicle listings, search/filtering, and transactions.
- Implemented dynamic inventory management enabling scalable listing expansion and developed a **5-criteria vehicle search system**, centralizing validation and filtering logic to reduce duplicate code by **40%**.

EDUCATION

University of Waterloo

September 2025 - April 2030

Bachelor of Computer Science (Honors with Co-op)

Waterloo, ON

- Coursework: Data Structures & Algorithms, Designing Functional Programs, Tools for Software Development
